

## Database Installation:

1. Install Apache, PHP and MySQL in your computer (see instructions on the BT-DB web page).
2. Download BT-DB.rar from web page.
3. Decompress file rar into Server HTML page (for example, in APACHE : Apache/htdocs)
4. Now, you have a new BT-DB directory.
5. In the directory BT-DB open the file 'p.php'. This file contains the username and password for the access at the database MySQL. You can change username (variable \$aa) and password (variable \$bb).  
**You MUST use the username and password that you used during the MySQL installation.**  
Save the file.
6. Open in a browser web the page: [http://localhost/BT-DB/database\\_create.php](http://localhost/BT-DB/database_create.php)
7. In this page insert the MySQL username and MySQL password (the same in p.php file)
8. Select button "Create the database"
9. Now you have created the BT-DB database
10. Open web page: <http://localhost/BT-DB/index.php>
11. Use for the first access:  
    USERNAME = root  
    PASSWORD=root
12. Select ADMINISTRATOR TOOL → CHANGE PASSWORD AND USERNAME and here you can change the administrator's username and password.

NOW the database BT-DB is working!
